Rough draft trans. of Zhurnal Tekhnicheskoy Fiziki (USSR) 1954, v. 24, no. 2, p. 329-336.

A method of harmonic analysis of the intensity distribution curve is used in determining the structural variations which arise during plastic deformation of polycrystalline samples of W and Ta. In order to refine the method for calculating the microdeformations, a relationship is established between the values of the coefficients of expansion into a Fourier series and the magnitude of the angle interval of the blurred line which has been assumed for the given analysis. It was found that after deformation the blurred lines on microphotographs (Mechanics, TT, v. 5, no. 10)
